

Pressure control for air and water Type CS

Features

- Pressure ranges 2 20 bar,
- Pressure connection G $^{1}/_{2}$ or G $^{1}/_{4}$,
- Contact system 3-pole (TPST) as standard and 1-pole as accessory,
- Adjustable differential,

- Relief valve as accessory,
- Manual switch to lock the contact system,
- Enclosure IP43 or IP55,
- Special versions with pressure connection made of polyacetal suitable in drinking water applications.

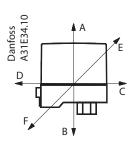

Approvals

EN 60 947-4-1 EN 60 947-5-1 China Compulsory Certificate, CCC

Pressure control for air and water, type CS

Technical data

S	bec	ific	ati	ons
~	200	····c	0.01	

Contact load	l _e	U _e
AC-3	12 A	220 – 415 V
AC-3	9 A	600 V
DC-13/14	2 A	220 V (3 contacts in series)

Electrical life on rated load 100.000 operations				
Mechanical life	1.000.000 operations			
Ambient temperature	-20 – 70 °C			
Towneysture of modium	Water	0 – 70 °C		
Temperature of medium	Air	-20 – 70 °C		
Vibration-proof	0 – 1000 Hz at 4g			
	Direction A-B	341 Hz		
Resonance frequency	Direction C-D	332 Hz		
	Direction E-F	488 Hz		
Diaphragm material	Hytrel			
Durantum annu antau	Special	Polyacetal, G ½		
Pressure connector	Others	Silumin, G ¼ or G ½		
Pressure relief valve (capacity)2000 cm³ from 10 to 1 bar in 18.8 sec.		·		
Grade of enclosure to IEC 529	IP43 or IP55			

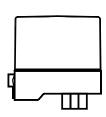

Properties according to EN 60947

	solid / stranded	0.7 – 2.5 mm ²	
Wire dimension	flexible, with / without ferrules	0.75 – 2.5 mm ²	
	flexible, with ferrules	0.5 – 1.5 mm ²	
Tightening torque	max. 1.2 NM		
Rated impulse voltage	4 kV		
Pollution degree	3		
Short circuit protection, fuse	25 A		
Insulation	600 V		
IP-index	IP43 or IP55		

Pressure control for air and water, type CS

Standard pressure switch type CS

The pressure switch is built up of the following main elements: connector, diaphragm, snap system, main spring, differential spring and a 3-pole or one-pole contact system. The stop pressure must be set on the main spring and the difference between start and stop pressures on the differential spring. Pressure from the controlled system is led, via the connector, to the diaphragm. The diaphragm converts this pressure to a mechanical movement which is transferred by the snap system to the contact system. In this way, the contact system starts or stops

a compressor/pump.

Setting

All standard versions of CS pressure controls are preset and supplied with springs under minimum compression.

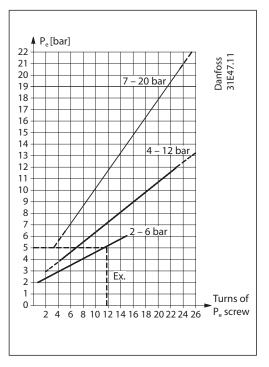

- Turn the stop pressure screw (1) the given number of times towards + (high stop pressure), see stop pressure graph.
- 2. Turn the differential screw (2) the given number of times towards + (max. differential), see differential pressure nomogram.
- 3. Start the plant and let it run until the required stop pressure is reached.
- 4. Turn the stop pressure screw (1) towards minus (lower stop pressure) until the plant stops.

Note!

If the differential is set at a value greater than the stop pressure the plant cannot start. If this is the case, set the differential at a smaller value (towards minus).

- 5. Reduce the pressure to the required start pressure.
- 6. Turn the differential screw (2) towards minus (smaller differential) until the plant starts.
- 7. Check that the plant stops and starts at the required pressures.

Stop pressure graph

Example

A compressor is to be regulated by a CS pressure switch. The start pressure is 3.5 bar, and the stop pressure 5 bar. The choice should be a CS with a range of 2 – 6 bar.

- 1. Turn the stop pressure screw (1) about 12 times. See cut-off pressure graphs.
- 2. Turn the differential screw (2) about 4.5 times. See CS 2 6 nomogram.

Take a straight line from 5 bar stop pressure on the nomogram to the differential, 1.5 bar and read off the number of turns, i.e. 4.5.

Data sheet

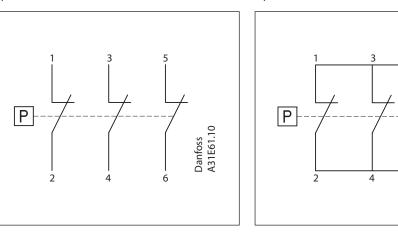

Pressure control for air and water, type CS

Mains connection

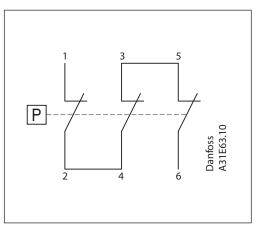

Dimensions [mm] and weights [kg]

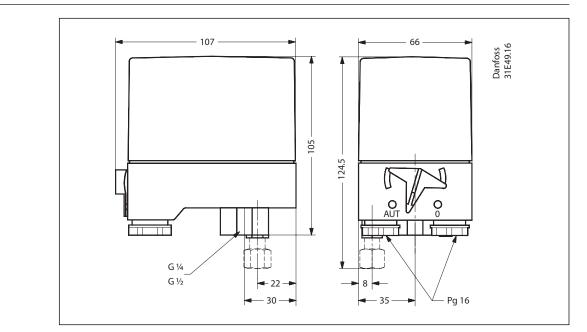

1-pole a.c. load

1-pole d.c. load

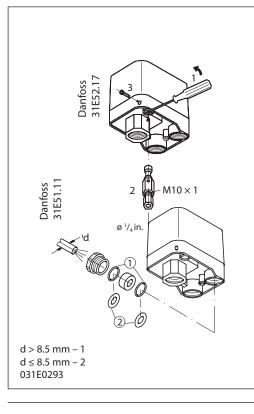

Contact load					
		l _e	U _e		
	AC-3	12 A	220 – 415 V		
		9 A	600 V		
	DC-13/14	2 A	220 V (3 contacts in series)		

Net weight approx. 0.5 kg

Installation

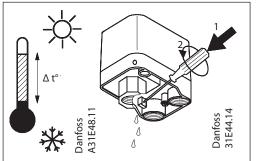

Recommended orientation

The pressure switches will operate regardless of their orientation. However, to meet the enclosure requirements of IP43 and IP55, they must be mounted vertically with the connection downwards. The CS pressure switches are self-supporting (on the connection).

Fitting a pressure relief valve 1. Remove the blanking plug 2. Fit the pressure relief valve 3. Fit the plastoform screw

Fitting screwed cable entries

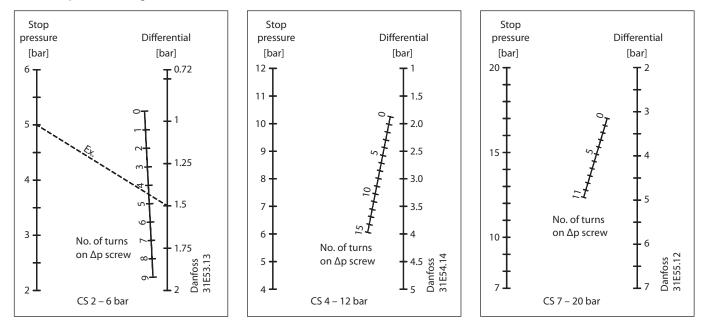

The accessory bag contains two sets of metal gaskets each with different internal diameters. These will give a sufficient cord relief if used correctly with the cable diameter concerned.

Drain hole

If because of large temperature variations there is a risk of condensate forming in the pressure switch, a screwdriver can be used to make a drain hole in the enclosure.

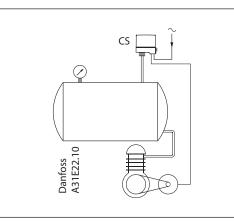

Differential pressure nomograms

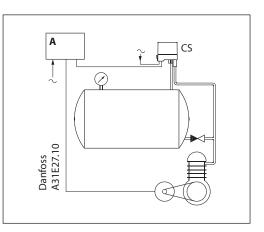

Pressure control for air and water, type CS

Application examples

Example 1

Control of an air compressor with a CS pressure switch.

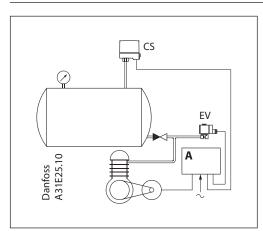

Example 2

Α

Control of a compressor with a CS pressure switch fitted with pressure relief valve. Note the check valve between pressure relief line and reservoir.

CS

Danfoss A31E24.10

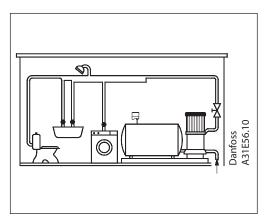

A: Motor starter or automatic star-delta switch

Example 3

Control of an air compressor with a CS. An EV210B 3B solenoid valve is recommended where there is need for especially fast pressure relief.

Example 4

Control of a centrifugal pump with a CS, via an automatic star-delta switch, motor starter, or similar.

Example 5

Pressure boosting system for domestic circuits. A type CS switch is used to start/stop the pump.
