## **Series P77**

# Single pressure controls for Refrigeration, Air-conditioning and Heatpump applications

#### **Product bulletin**

These pressure controls are designed for use in a variety of applications involving refrigeration high or low pressure. Models supplied have a "whole range" design, enabling them to be used with refrigerants R22, R134A, R404A, R410A, R744 (CO $_2$ ), R717 (NH3), R290, R600 natural HC refrigerants CO $_2$  and all other non-corrosive refrigerants which are within the operating range of the control. They may also be used for other high or low pressure applications such as air, water etc. Models which can be used with ammonia are included in the program. Also models tested and approved to PED 2014/68/EU Cat. IV (supersedes DIN and TUV approval) are included in the program.

The P77 series pressure controls may be used for control functions or limit functions, depending on model number. All models are provided with alarm contacts. All standard models have phosphor bronze bellows and brass pressure connections. Models for use with ammonia (NH3) are provided with stainless steel bellows and connectors. Devices conforming to PED 2014/68/EU Cat. IV (HP models) have the fail-safe function with double bellows.

Their IP54 classification means that these pressure controls are suitable for almost all applications.

P77 Series Controls for Hazardous Location Applications use a low energy signal from inside an explosive zone on commercial refrigeration and airconditioning applications. The controls have special dry circuit switches with gold-plated contacts for improved contact characteristics required in low voltage, low current circuits.

They are designed to operate in

- Group II, Zone 2 (per the ATEX Directive) environments.
- Class I, Division 2, Group D (per NFPA 70 and CSA C22.2) environments.

For low current applications custom models with gold plated contacts may be requested. Contact your salesman.

Generous wiring space

Easy wiring and maintenance

Splash-proof enclosure (IP54)

Can be used for indoor/outdoor applications

SPDT contacts are provided as standard on single pressure controls

Can be wired for alarm functions

Trip-free manual reset

Override is not possible in the control function

ATEX approved

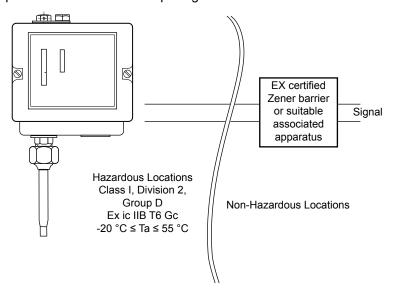

For use with flammable refrigerants (R290, R600). Meets 2014/34/EU ATEX directive.

### **Electrical connection hazardous application**

Use only cables and cable entries approved for propane applications. Do not allow cables to come into contact with sharp edges. Install cables with adequate stress relief to avoid pulling at the terminal.

Intrinsic safety protection method

#### **Entity parameters (P77 pressure control parameters)**

Maximum switch loads					
Pi max (P max)	1 W				
Ui Max (V max)	30 V				
li Max (I max)	0.1 A				
Ci max	0.5 nF				
Li max	0.2 μΗ				

Selected associated apparatus providing output entity parameters must be third party listed for the application, and have intrinsically safe entity parameters conforming with table below.

#### Intrinsically safe entity parameters for the associated apparatus

P77 pressure control		Zener barrier or suitable associated apparatus
Ui Max (V max)	≥	Voc or Vt (or Uo)
li Max (I max)	≥	Isc or It (or Io)
Pi max (P max)	≥	Po
Ci + Ccable	≤	Ca (or Co)
Li + Lcable	≤	La (or Lo)

**IMPORTANT:** The controls are intended to control equipment under normal operating conditions. Where failure or malfunctioning of the controls could lead to an abnormal operating condition that could cause personal injury or damage to the equipment or other property, other devices (limit or safety controls) or systems (alarm or supervisory systems) intended to warn of or protect against failure or malfunctioning of the controls must be incorporated into and maintained as part of the control system.

#### Type number matrix

P77AAA	Automatic reset					
P77BCA	Open low - manual reset					
P77BEA	Open high - manual reset					
P77AAW	HP or LP Limit (autoreset)					
	HP conforming to PED 2014/68/EU					
P77BEB	HP Limit (Manual Reset) conforming to PED 2014/68/EU					
P77BES	HP Safety Limit (Manual Reset) conforming to PED 2014/68/EU					
P77BCB	LP Limit (Manual Reset) including lockplate assy					
P77XAAW	HP or LP Limit (autoreset) HP conforming to PED 2014/68/EU HP or LP conforming to ATEX 2014/34/EU					

#### **Mounting**

Mounting can easily be done with mounting bracket 271-51L (order separately) or directly on a surface. Mounting holes 4,5 mm Ø and M4 holes are provided.

## **Adjustment**

Adjustment of range and differential can be done by turning the hexagonal range screw and differential screw. Manual reset models have a range screw only. The adjustment screw can also be locked by a lock plate accessory (KIT023N600). The lock plate is included with those devices which are conform to PED 2014/68/EU Cat. IV.

On all models the scale indicates the high switch point (Except type P77BCA, P77BCB, here the scale indicates the low (cut-out) switch point). The low switch point can be derived by deducting the differential value from the high switch point.

## Repair and replacement

state the type/model number of the control.

Repair is not possible. In case of an improperly functioning control, please check with your nearest supplier.
When contacting the supplier for a replacement you should

This number can be found on the data plate or cover label.

## Contact functions (see also "Type number selection" tables)
