SIEMENS

Burner controls

LME75... LME76...

The LME75/LME76 is a microprocessor-based unit with matching system components for controlling and supervision of forced draft burners of medium to large capacity.

The LME75/LME76 and this data sheet are intended for original equipment manufacturers (OEMs) using the LME75/LME76 in or on their products.

Notes

Caution!

All the safety, warning, and technical notes given in the basic documentation for the LME75/LME76 (P7156) also apply to this document. Failure to observe these poses a risk of damaging the safety functions and the risk of electric shock.

Building Technologies

The LME75/LME76 is responsible for commissioning and supervising 1-stage or 2-stage forced draft burners or forced draft burners with pneumatic/mechanical ratio control modulation in continuous operation.

Depending on the burner control, flame supervision takes place during continuous operation with the following detectors or safeguard devices:

Continuous operation

LME75	LME76	
•		QRA7 UV flame detector
•		QRI infrared flame detector
•	•	Ionization probe
	•	LFS1 flame safeguard with RAR or ionization probe

Intermittent operation

LME75	LME76	
	•	LFS1 flame safeguard with QRA2/QRA4/QRA10 UV flame detector
	•	LFS1 flame safeguard with QRA2/QRA4/QRA10 UV flame detector and ionization probe

- Applications in accordance with EN 267: Forced draft burner for liquid fuels
- Applications in accordance with EN 676: Forced draft burner for gaseous fuels
- Applications in accordance with EN 746-2: Industrial thermoprocessing equipment

 Part 2: Safety requirements for combustion and fuel handling systems
- Type-tested and approved in accordance with DIN EN 298

- Undervoltage detection
- Electrical remote lockout reset facility
- Accurate control sequence thanks to digital signal handling
- Multicolor indication of fault status and operational status messages
- Air pressure supervision with function check of air pressure switch during start and operation (depending on PME75/PME76 and the respective parameterization)
- Limitation of restarts
- Parameterizable, controlled intermittent operation after a maximum 24 hours of continuous operation (parameter 239 = 1) e.g., for applications involving an LFS1 flame safeguard and its QRA2/QRA4/QRA10 flame detector
- Continuous operation (parameter 239 = 0)
- BC interface
- The parameters for the LME75/LME76 can be set via the display or the ACS410
- Plug-in space for PME75/PME76

The following items are integrated into the LME75/LME76:

- BC interface for connecting a display or PC
- Lockout reset button (info button)
- 3-multi color signal lamp (LED) for operating status and fault status messages (lockout reset button (info button) and 3 additional buttons for operation in conjunction with 3 x 7-segment display)
- Analog inputs for load controller DC 0...10 V, DC 0/4...20 mA, 0...135 Ω
- Interface for PME75/PME76
- 3 x 7-segment display for service, fault and status information
- Control for one actuator
- Control for a PWM fan motor (depending on PME75/PME76 and the respective parameterization)

SIL3 classification to DIN EN 13611

SIL3

Suitable for use in safety-related, industrial applications up to safety level SIL3 (safety integrity level 3).

The following parameters apply:

Burner control	Flame detector / Flame safeguard	Operating mode	SIL level	PFHD [1/h]	SFF
LME75	lonization probe	Continuous operation	SIL3	3.0·10 ⁻⁸	97%
LME75	Ionization probe and QRI	Continuous operation	SIL3	3.1·10 ⁻⁸	97%
LME75	Ionization probe and QRA7	Continuous operation	SIL3	4.0·10 ⁻⁸	99%
LME76	Ionization probe	Continuous operation	SIL3	3.0·10 ⁻⁸	97%
LME76	LFS1.11Ax with RAR9	Continuous operation	SIL3	4.3·10 ⁻⁸	97%
LME76	LFS1.21Ax with ionization probe	Continuous operation	SIL3	4.3·10 ⁻⁸	97%

Caution!

Only permitted in intermittent operation (where continuous operation is <24 hours) Parameter 239 = 1 and parameter 218 = 80050.31 seconds

or with external control via heat request of no more than 24 hours.

LME76	LFS1.21Ax with QRA2 / QRA4 / QRA10	Intermittent (<24 hours)	SIL2	2,5·10 ⁻⁷	99%
LME76	LFS1.21Ax with ionization probe and QRA2 / QRA4 / QRA10	Intermittent (<24 hours)	SIL2	2.5·10 ⁻⁷	99%

$\mathbf{\Lambda}$

Caution! Only permitted with a maximum operating duration in intermittent mode (<1 hour of continuous operation) Parameter 239 = 1 and parameter 218 = 3589.7 seconds

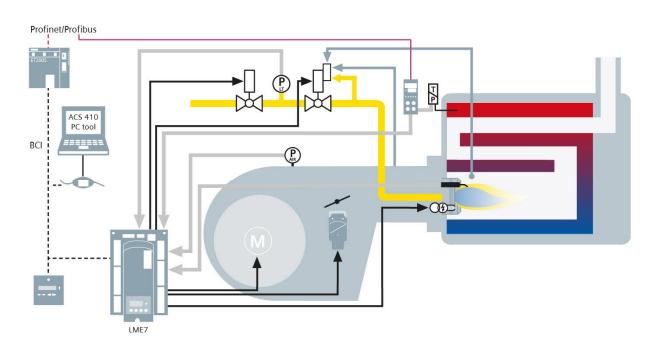

or with external control via heat request of no more than 1 hour.

LME76 LFS1.21Ax with QRA2 / QRA4 / QRA10	Maximum operating duration in intermittent mode (<1 hour)	SIL3	6.3*10 ⁻⁸	99%
--	--	------	----------------------	-----

The LME75/LME76 has a designed lifetime* of 250,000 burner startup cycles which, under normal operating conditions in heating mode, corresponds to approx. 10 years of usage (starting from the date of manufacture on the nameplate). This lifetime is based on the endurance tests specified in standard EN 298. A summary of the conditions has been published by the European Control Manufacturers Association (Afecor) (www.afecor.org).

The designed lifetime is based on use of the LME75/LME76 according to the manufacturer's data sheet and the basic documentation. After reaching the designed lifetime in terms of the number of burner startup cycles, or after the corresponding usage time, the LME75/LME76 must be replaced by authorized personnel.

* The designed lifetime is not the warranty time specified in the Terms of Delivery.

The system components for the LME75/LME76 (AZL2) are connected directly to the LME75/LME76 via the BC interface. All safety-related digital inputs and outputs of the system are monitored by a contact feedback network. For continuous operation, the ionization probe, QRA7, QRI, or LFS1 flame detector (including its flame detector RAR or ionization probe) can be used in conjunction with the LME75/LME76. The LME75/LME76 are operated and parameterized via the AZL2 or PC tool. The AZL2 features an LCD and menu-driven operation, offering straightforward operation and targeted diagnostics. When making diagnostics, the display shows operating states and the type of error. Passwords protect the different parameter levels of the burner/boiler manufacturer and heating engineer against unauthorized access. Simple settings that the plant operator can make on site do not require a password.

	Operation	DIN EN 60721-3-3
	Climatic conditions	Class 3K3
	Mechanical conditions	Class 3M2
	Temperature range	-40+60 °C
	Humidity	<95% r.h.
	Installation altitude	Max. 2,000 m above sea level

Warning!

Condensation, formation of ice, and ingress of water are not permitted. Failure to observe this poses a risk of damaging the safety functions and the risk of electric shock.

Flame supervision with ionization probe

With LME75/LME76 at terminal X10-06.

Warning!

- Provide protection to prevent people from coming into contact with the ionization probe (risk of electric shock)!
- When monitoring ionization currents in earth-free mains, connect terminal X10-06/1 pin 1 to burner ground

Short circuit current Ma	ax. AC 1 mA
Permissible length of flame detector cable 30 (laid separately)	0 m (100 pF/m), unshielded

	At mains voltage	Flame intensity
	120 V AC / 230 V AC	parameter 954.00
Detector voltage between ionization probe and ground (AC voltmeter Ri ${\geq}10~\text{M}\Omega)$	Approx. 300 V AC	
Switching threshold (limit values):		
Switching on (flame ON) (DC ammeter Ri ≤5 kΩ)	1.5 µA	20%
Switching off (flame OFF) (DC ammeter Ri \leq 5 k Ω)	0.5 µA	0%
Recommended detector current for reliable operation	4 µA	>40%
Switching threshold in the event of poor flame during operation (LED flashes green)	2 µA	Approx. 30%
Possible detector current with flame (typical)	30 µA	100%

Note!

As the detector line capacitance (detector line length) increases, the voltage at the ionization probe – and thus the detector current – will drop. Long line lengths and very high-ohmic flames may necessitate the use of a lowcapacitance detector cable (e.g., ignition cable). In spite of special electronic circuits designed to compensate possible adverse effects of the ignition spark on the ionization current, it is important to ensure that the minimum detector current required is already available during the ignition phase. If this is not the case, the primary ignition transformer connections must be interchanged and/or the electrodes relocated.

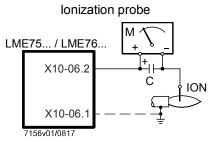

Technical data (continued)

Connection diagram

Assignment of terminals for LME75/LME76: Terminal X10-06 pin 2 Flame signal ionization input

Measuring circuit for detector current measurement

Key

- C Electrolytic condenser 100...470 µF; 10...25 V DC
- ION Ionization probe
- M Micro-ammeter Ri max. 5000 Ω

Warning!

If the ionization probe and QRA7, QRI, or LFS1 are operated simultaneously, the parameter settings in the following chapters must be observed: "Ionization probe terminal X10-06", "QRA7/QRI terminal X10-05 (LME75 only)", and "LFS1 terminal X10-05 (LME76 only)" in the basic documentation for the LME75/LME76 (P7156).

If this is not observed, there is a risk of device functions being impaired.

Flame supervision with QRA7

With LME76 at terminal X10-05.

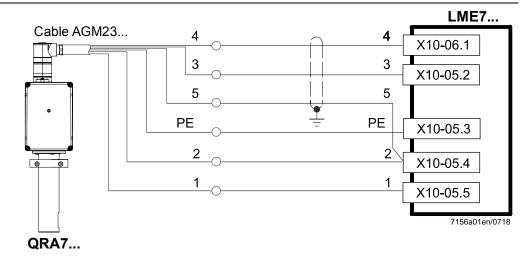

Warning! The QRA7 must not be connected to the LME76. Failure to observe this instruction will result in the LME76 or QRA7 becoming defective.

Technical data (continued)

Connection diagram

Connection diagram with flame signal measurement

Warning!

• The output terminal X10-05 pin 2 *QRA7 detector test* is not short-circuit-proof!

A short-circuit in terminal X10-05 pin 2 to ground can destroy the QRA7 output

 If the ionization probe and QRA7, QRI, or LFS1 are operated simultaneously, the parameter settings in the following chapters must be observed: "Ionization probe terminal X10-06", "QRA7/QRI terminal X10-05 (LME75 only)", and "LFS1 terminal X10-05 (LME76 only)" in the basic documentation for the LME75/LME76 (P7156).

If this is not observed, there is a risk of device functions being impaired.

Flame supervision with QRI

With LME75 at terminal X10-05.

Warning! The QRI must not be connected to the LME76. Failure to observe this instruction will result in the LME76 or QRI becoming defective.

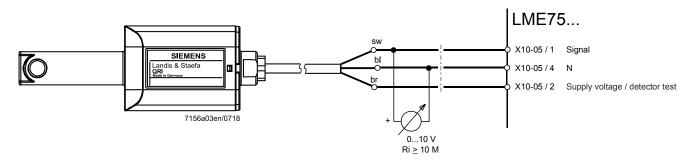

All measured voltages refer to connection terminal N (terminal X10-05 pin 4).

QRI detector	test in operation (terminal X	10-05 pin 2)
Operation		14 V DC
Detector test		21 V DC
Required flame signal voltage (terminal X10-05 pin 1)		Min. 3.5 V DC
Threshold va	lues when flame is supervise	ed by QRI
• Start prevention (extraneous light)		Flame intensity > 5% (parameter 954.01)
Operation		Flame intensity > 50% (parameter 954.01)
Permissible length of detector cable (laid separately)		Max. 100 m, unshielded Min. 3 cm distance to other cables
Parameter	Function	
954.01	Intensity of flame	

For more detailed information about QRI, refer to data sheet N7719.

Connection diagram

Caution!

Ensure the 3 QRI connecting wires are connected properly. If connected incorrectly to terminal X10-05, there is a risk that the LME75 and QRI may malfunction.

Flame supervision with LFS1

With LME76 at terminal X10-05.

Warning!

An LFS1 or the connection between terminal X10-05 pin 5 and terminal X10-05 pin 1 must not be connected to the LME75. Failure to observe this instruction will result in the LME75 becoming defective.

Caution!

Continuous operation of the LME76 with LFS1 is only permitted in conjunction with...

- LFS1.11Ax and RAR9
- LFS1.21Ax and ionization probe

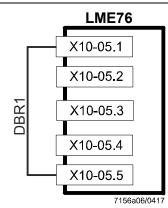

It is only permitted to operate the LME76 with the LFS1.21Ax and QRA2/QRA4/QRA10 intermittently (with a maximum continuous operation of 24 hours).

Parameter 239 = 1 and parameter 218 = 80050.31 seconds or with external control via heat request < 24 hours.

		Intensity of flame
Required flame signal during operation	Mains voltage at terminal X10-05 pin 3 and no mains voltage at terminal X10-05 pin 1	100%
No flame signal during operation	Mains voltage at terminal X10-05 pin 1 or no mains voltage at terminal X10-05 pin 3	0%
Extraneous light in standby / startup	Mains voltage at terminal X10-05 pin 3 or no mains voltage at terminal X10-05 pin 1	100%
No extraneous light in standby / startup	Mains voltage at terminal X10-05 pin 1 and no mains voltage at terminal X10-05 pin 3	0%

ParameterFunction954.01Intensity of flame

For more detailed information on LFS1, refer to data sheet N7782 and user documentation A7782.

Connection diagram with LFS1

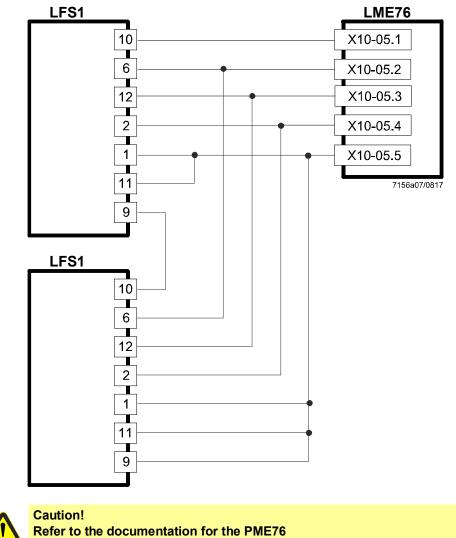

Refer to the documentation for the LFS1 → Data sheet N7782 → User documentation A7782

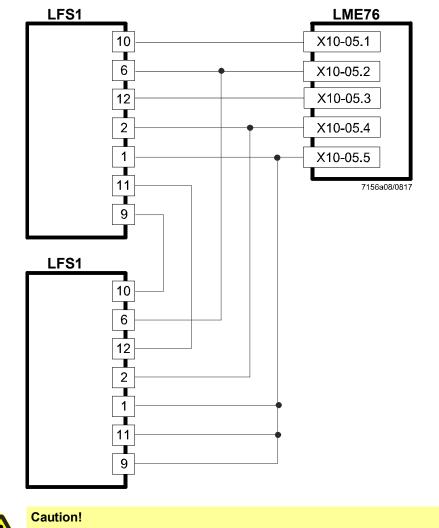

Caution!

AL	Alarm device
Dbr	Wire link
$\overset{{}_{-}}{\bigcirc}$	
∬ ů/reset (EK1)	Lockout reset button (info button)
EK2	Remote lockout reset button
FSV	Flame signal amplifier
ION	Ionization probe
К	Relay contact
LED	3-color signal lamp
LFS1	Flame safeguard
LP	Air pressure switch
LR	Load controller
LR-OPEN	Load controller OPEN position
LR-CLOSED	Load controller CLOSED position
Μ	Fan motor
NT	Power supply unit
P LT	Pressure switch valve proving
Pmax	Pressure switch-max
Pmin	Pressure switch-min
POC	Valve closing control (proof of closure)
PV	Pilot valve
QRA7	UV flame detector
QRI	Infrared flame detector
R	Control thermostat or pressurestat
SA	Actuator
SA-KL	Actuator low-fire
SA-NL	Actuator high-fire
SA-R	Actuator feedback
SA-ZU	Actuator CLOSED
SA-ZL	Actuator ignition load
SK	Safety loop
SV	Safety valve
V1	Fuel valve
V2 / V2a	Fuel valve
Z	Ignition transformer
	Input/output signal 1 (ON)
	Input/output signal 0 (OFF)
xxxxx	Demoissible insult simplify $(ON) = 0 (OFF)$

	Input/output signal 1 (ON)
	Input/output signal 0 (OFF)
$\boxtimes\!$	Permissible input signal 1 (ON) or 0 (OFF)
